

Saturn-S2000 Series

Secure and Spacious
Ultra Wide Lane Design for Motorcycle Access

Introduction

Unveiling the ZKTeco Saturn-S2000, an innovative swing barrier turnstile designed for an unparalleled passage experience. The Saturn-S2000 offers two models (S2000 and S2200). Its chassis is mainly made from stainless steel material(SUS304), providing an IP54 protection rating that ensures it can withstand water and dust. Also, Saturn-S2000 is equipped with a clutch to enhance security.

The Saturn-S2000 has been upgraded with a notable feature: a standard 12 pairs of infrared sensors (expandable to 18 pairs) with integrated dual-zone pinch protection. It ensures enhanced safety and improved obstacle detection. Also, the authentication area is enhanced with 2.5D tempered glass for scratch resistance.

Saturn-S2000 maintains its multi-authentication flexibility as before, with facial, QR code and RFID card verification. Additionally, Saturn-S2000 features an expanded 900-1200mm channel width with stainless steel swing barrier, specifically engineered to accommodate both pedestrians and two-wheeled motorcycles. The robust design maintains security while allowing smooth transit for authorized vehicles.

Pedestal Removable Design

Both side pedestals can be removed, providing maximum convenience during installation.

Floating Base System

For flexible installation and it is compatible with various floor surfaces. With floating beam architecture.

Durability

The lid is made using an integrated molding process, achieves an IP54 protection rating, offering robust defense against water and dust. The product is designed to thrive in extreme conditions, maintaining functionality after an 8-hour period in sub-zero temperatures as low as -30°C.

Material Innovation

The outer surface is treated with stainless steel brushing, steel surfaces with unique, uniform, and delicate filament - like textures, adding a sense of sophistication and a high - end look. The resulting soft luster is more comfortable to the eye compared to the intense reflection of mirror - finished stainless steel. In terms of durability, it significantly improves scratch and wear resistance, and also enhances corrosion resistance to some extent by optimizing the surface microstructure. The identification area is elegantly embedded with 2.5D tempered glass, which is resistant to scratches and wear, enhancing the clarity of the identification process.

DC Brushless Motor

The Saturn-S2000 uses DC brushless motors, which are stable and reliable, and the movement life reaches 5 million MCBF.

The barrier material is made of acrylic and the default lane width is 600mm, and an optional lane width 900mm is available.

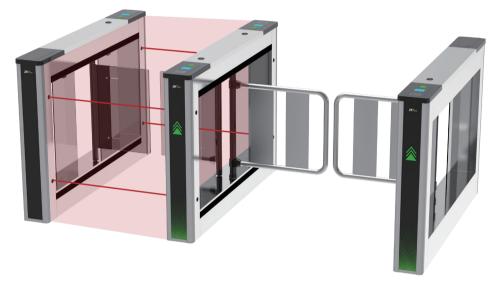

*When the lane width extends beyond 900mm to 1200mm, the barrier must be upgraded to stainless steel (replacing the acrylic material).

^{*}Stainless steel barrier material required for lane widths exceeding 900mm.

Safety and Security

The safety features include opening the gate when power is cut, multiple anti-pinch functions, and the product has an emergency door - opening function. Whether there is a power outage or a fire incident, the device can be activated to the normally open mode. Regarding the anti - pinch feature, it not only has multiple pairs of infrared sensors to prevent pinching people, but also an internal clutch that can respond immediately to stop the device from further operation. It provides a standard of 12 pairs of infrared sensors, expandable to 18 pairs for enhanced coverage. This comprehensive detection system precisely identifies unauthorized access attempts including tailgating, reverse passage, and crawling incidents.

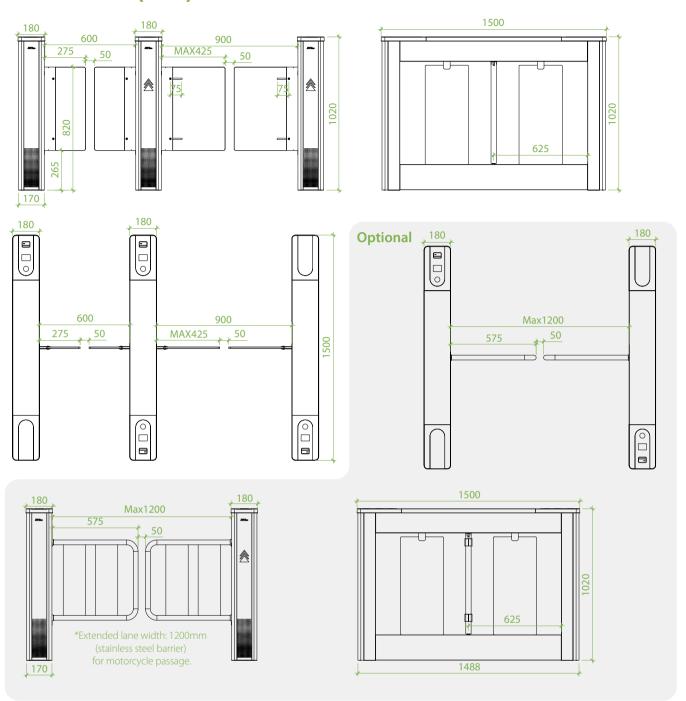

Specifications

Model	Saturn-S2000	Saturn-S2200
Audio Indicator	Internal speaker	
Visual Indicator	Top LED indicator: Blue=Door closed/stand b Green=Door opening Red=Door closing/alarm	Side LED indicator by Green=Lane available Red=Lane unavailable
Display	NA	
Lane Type	Single lane	Dual Swing (for additional lane)
Lane Width	600~900mm (Optional) (Acrylic) Maximum 1200mm (Optional) (Stainless steel) (For two-wheeled motorcycle access)	
Barrier Movement Type	Swing	
Motor	DC brushless motor	
Movement Speed	Average 1s per movement (Adjustable open/close timing)	
Movement Accuracy	Middle	
Clutch	Equipped	
Lid Material	Stainless steel & Polycarbonate
